

Biofuel

KONBINICorp became Earth's leading biofuel producer in 2133, the same year it was granted majority shareholder status of off-world corpse disposal company, Hades Solutions.

Use 'Biofuel' to replenish any biofuel vehicle.

PROtein Bar 3.1

KONBINICorp's latest iteration of its bestselling PROtein Bar, with roasted bell cricket for extra CRUNCH. This model boasts the most impressive protein-to-weight ratio of all competitors, at 73%, and is the snack of choice of champion pseudomuscle-category weightlifter, Alton Gurin.

Replenishes 5 Stamina on use.

bibleTECH's SOLOMON III (Right Arm)

bibleTECH is a rising star in the competitive off-world prosthetics industry. The SOLOMON III boasts a closed-system pneumatic design, allowing for zero loss of mechanical efficiency in zero-gravity environments. Pseudomuscle-woven fingers have made this model a favourite amongst those whose trade calls for a certain amount of precision.

ASC Ideatic-Wave Disruptor

Ankalaev-Smith-Cohen were the first conglomerate to discover the existence of a sub-material realm, and the first to weaponise it. The ASC-IWD fires a short, canonical burst of ideatic radiation that rearranges the metaphysical makeup of anything that is caught in its blast.

ASC Military-Grade ARGOS-Panoptics

The psycho-attunement rate of the ARGOS-Panoptics is incredibly low — 15.3%. Those whose brains fail to interface properly with the neuroimplant and the optics' 360° field-of-vision suffer from chronic vertigo and nausea of which there is only a single known treatment: complete separation of the visual cortex from the rest of the brain.

Shen FutureTechnology President C-2 Engine

Shen FutureTechnology remains a major player in the field of astronautical engineering, even without the leadership of the Shen family. The President C-2 is the successor to the first 'ideatic engine', which quickly replaced all conventional rocket engines for those that could afford to do so. It utilises the concept of 'Ideatic True Randomness' to manipulate space-time, effectively 'jumping' the vessel to infinite places around the universe in an infinitely small amount of time, until it reaches its preprogrammed destination. At least, this is how it's explained to most people.
